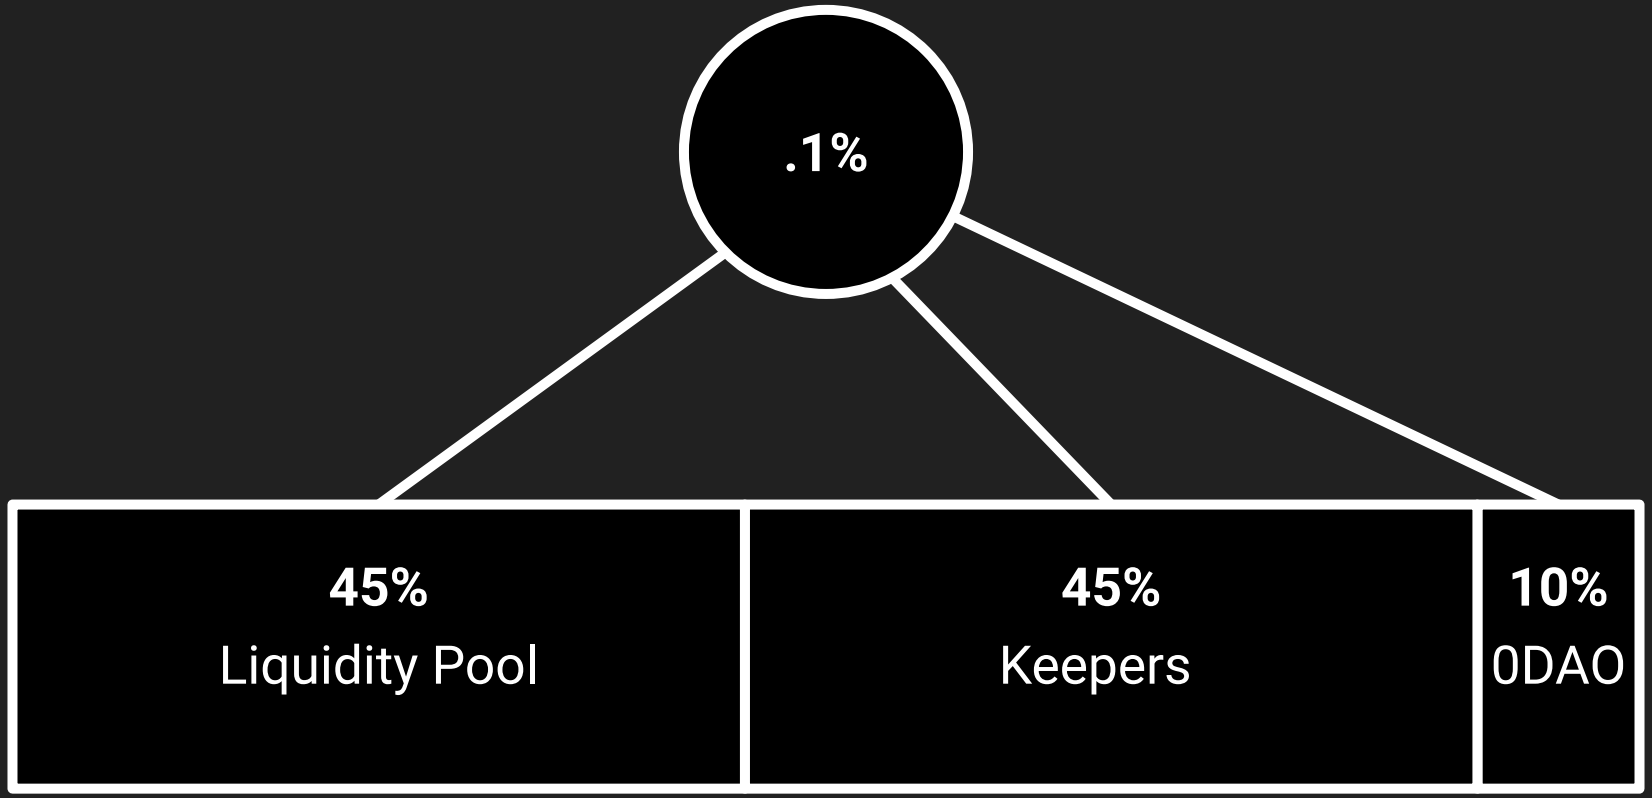
Fee Distribution



Loan Size

.026 BTC

Ensures fees are not a high proportion of any transaction

1 BTC

Minimizes risk if funds are lost

Gas as a Service

Start a Swap

No Ethereum needed. Simply deposit BTC into a compatible DEX to receive DAI on Ethereum.

Gas Fee

During a swap, 0Confirmation Keepers pay gas for transactions in Ether.

Payment Deducted

Keepers calculate the equivalent gas value in BTC and deduct it from the resulting RenBTC.

What’s Next?

Token Support

0Confirmation currently only whitelists DAI due to high liquidity and negligible volatility, but the protocol can expand to support more.

More Chains

RenVM supports Bitcoin Cash and ZCash in addition to Bitcoin. 0Confirmation is easily extensible to these chains in the future.

Integration

0Confirmation may be integrated into any existing DEX (decentralized exchange) for easy access and higher liquidity.
